OFFICIAL USER & OPERATIONAL GUIDE

Complete System Flowchart & Standard Usage Manual

This manual demonstrates the complete working cycle of the QuickLifeNow Task Management project. It is illustrated using **Standard Engineering Flowchart Diagrams** with clear step-by-step human instructions, designed so that any manager, lead, employee, or customer can understand the system in minutes.

STANDARD FLOWCHART REFERENCE KEY (HOW TO READ THESE DIAGRAMS)

Terminal Oval
Indicates where a process begins or concludes successfully.

User Action / Input
A button clicked, form filled, or file uploaded by an employee.

Work & System Process
Active work execution, task calculation, or database update.

Decision Diamond
Branching condition leading to distinct Yes and No paths.

Diagram 1
End-to-End Lifecycle
Complete 5-stage overview from creation to final sign-off.

Diagram 2
Creation & Delegation
1-to-many branch allocation and multi-level tree hierarchy.

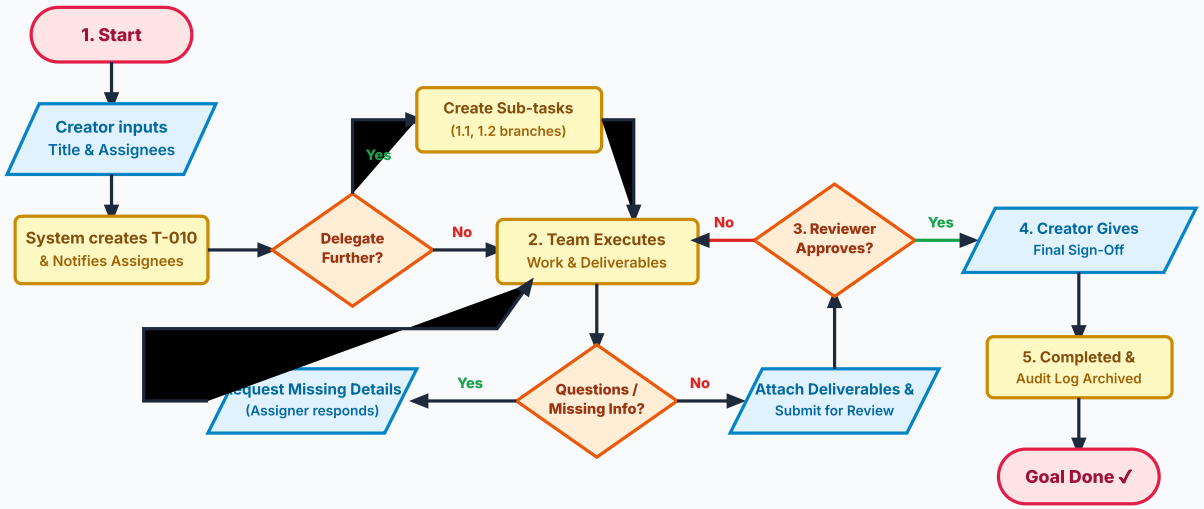

Diagram 3
Execution & Questions
Working process & "Request Missing Details" question loop.

Diagram 4
Review & Revision Loop
Approval verification, feedback revision, and creator sign-off.

Diagram 5
Communication & Audit
Task messaging, branch reassign, and immutable work logs.

The Complete Journey: How Work Moves in QuickLifeNow

Every assignment follows a disciplined, transparent 5-step lifecycle ensuring accountability, zero lost tasks, and full reviewer verification.

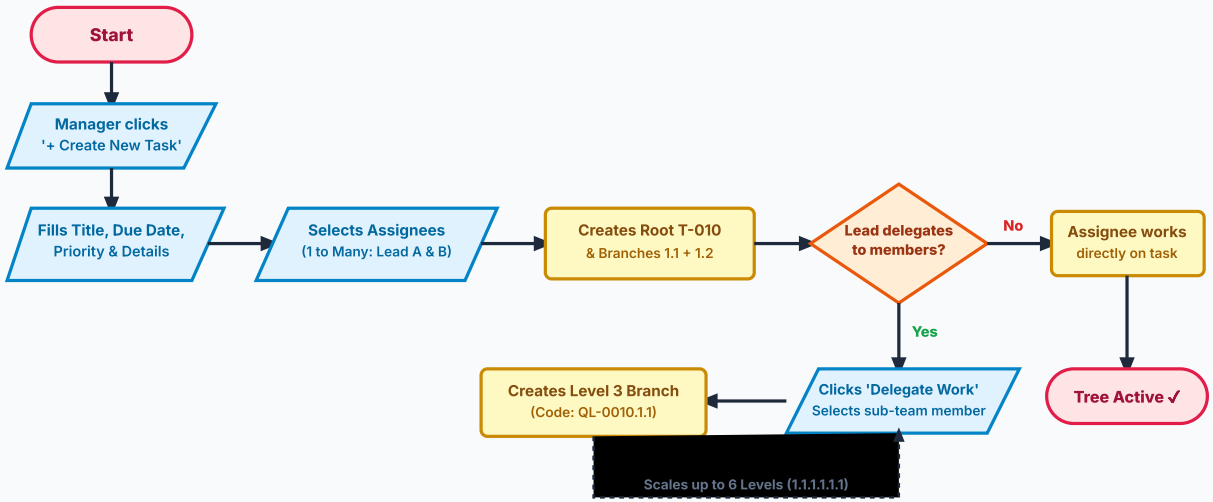

OPERATIONAL GUIDE (HOW TO USE)

1. **Initiation & Goal Setting**
   Click **+ New Task**. Set the title, department, priority, and assign to 1 or more leads. The system assigns a unique Task Code (e.g. `T-010`).
2. **Active Execution & Delegation**
   Assignees see the task in their **My Action Required** tab. If large, they can sub-delegate to team members (1.1, 1.2) or work directly.
3. **Question Loop (No Blockers)**
   If anything is unclear, the assignee clicks **Request Missing Details**. The assigner provides instant clarity so work resumes without delay.
4. **Review & Quality Control**
   Assignee uploads files & submits. The reviewer inspects deliverables. If fixes are needed, they return it with constructive notes; if good, they approve.
5. **Final Creator Sign-off**
   When all sub-branches pass review, the task creator performs final verification and clicks **Final Sign-off**. Status turns to *Completed*.

Golden Principle
A task is only marked **Completed** when the original creator signs off. Team members never sign off on their own work, ensuring strict audit compliance.

Task Creation & Delegation: How Large Projects Are Broken Down

How a single company goal is systematically delegated into sub-tasks with independent branch owners and isolated responsibility.

HOW DELEGATION WORKS IN PRACTICE

1 Initiating Multiple Leads

When creating a task, you can pick multiple assignees (e.g. Aman & Pooja). QuickLifeNow creates isolated sub-branches `1.1` and `1.2`.

2 Further Delegation (Leads to Team)

Team leads open their branch and click **Delegate Work**. They assign sub-tasks (e.g. `1.1.1` to Rohit, `1.1.2` to Neha).

3 Strict Permission Boundaries

Sub-assignees only see the exact deliverables assigned to them. They cannot alter sibling branches or edit parent goals.

4 Real-time Hierarchy Tree

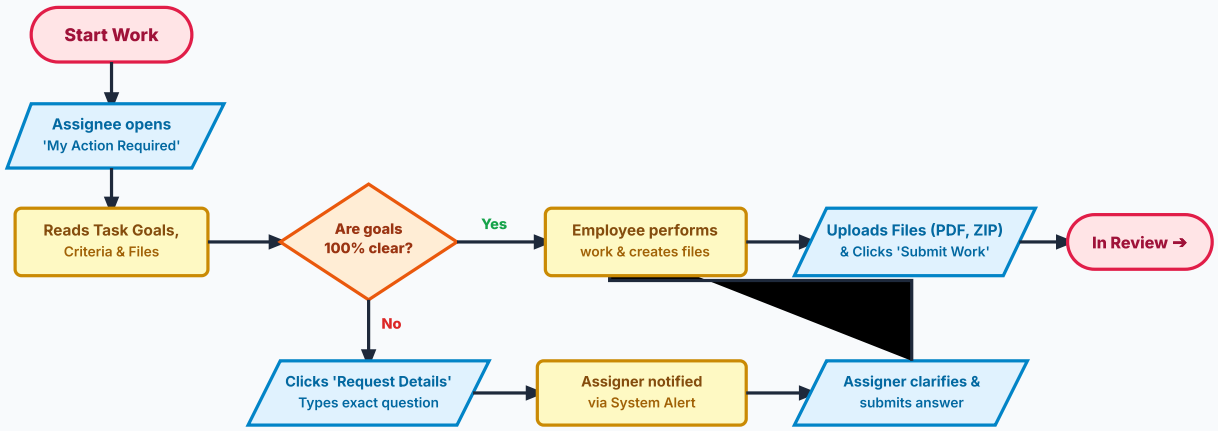

On every task page, clicking the **Hierarchy Flow** tab shows an interactive visual tree diagram displaying all levels and live branch statuses.

Zero Interference Guarantee

When Lead A finishes work, Lead B is completely unaffected. Each branch operates on its own timeline until all work merges at the parent review stage.

Assignee Execution: What To Do When Instructions Are Unclear

How the built-in "Request Missing Details" protocol eliminates wrong assumptions and guarantees quality output before submission.

❓ HANDLING MISSING INFORMATION

1 Inspect Goals in "My Action"

When you log in, open **My Action Required**. Review the requirements, attachments, and deadline carefully.

2 Never Guess — Ask Instantly

If you lack a file, password, or requirement, click **Request Missing Details**. Type your query. The task safely pauses without penalizing your due date.

3 Assigner Clarification

The assigner receives an alert in their queue. They provide the answer and attachments. The task instantly reactivates in your active list.

4 Submitting Clean Deliverables

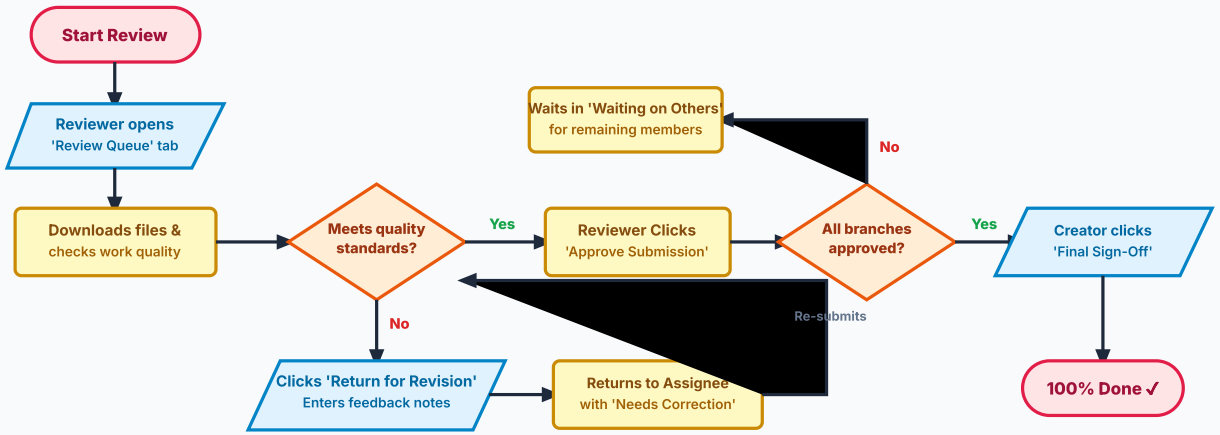

When finished, click **Submit Work for Review**. Attach your final documents (PDF, Excel, images, code files) and write a short completion note.

🚀 **Best Practice**

Always attach deliverable files directly through the submit modal. This ties proof of work directly to your submission timestamp for the reviewer.

Quality Control & Sign-Off: How Work Is Inspected and Approved

How submissions are rigorously checked, returned with revision notes if flawed, or signed off by the original task creator.

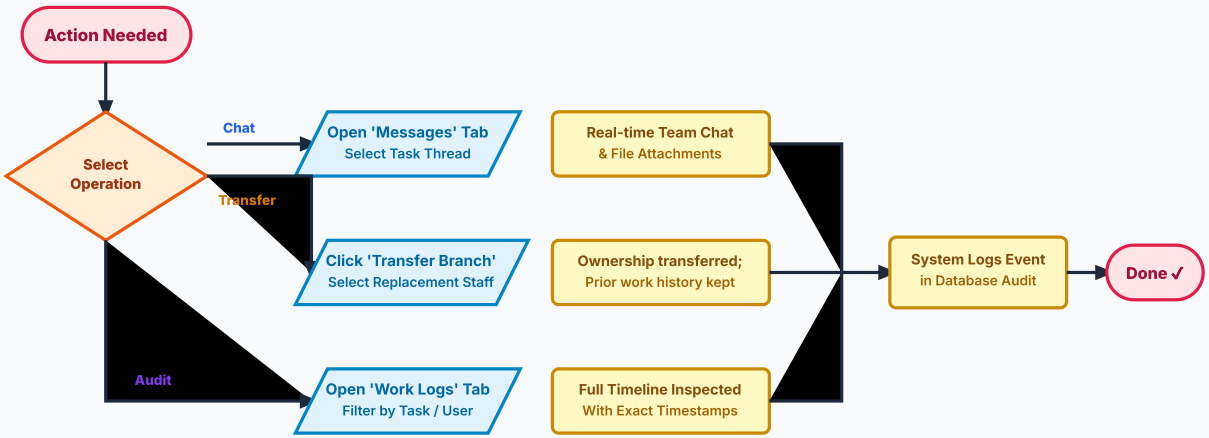

HOW REVIEW & SIGN-OFF WORKS

1. **Review Queue Notification**
   When deliverables are submitted, the designated reviewer (or assigner) sees the submission in their **Review Queue**.
2. **Direct File Verification**
   The reviewer clicks to download files directly. They evaluate the deliverable against the original instructions and quality criteria.
3. **Revision Feedback Loop**
   If anything requires changes, click **Return for Revision** and write specific comments. The assignee fixes the work and re-submits.
4. **The 2-Tier Sign-off Seal**
   Branch approval verifies the member's piece. When all branches are approved, the main creator verifies the whole project and signs off.

Full Accountability Log
Every review decision, return comment, and sign-off is stamped with user identity, date, and exact time in the immutable Work Logs audit trail.

Collaboration, Handover & Auditing: Complete System Transparency

How team members communicate in real-time, how work is transferred if an employee takes leave, and how managers audit all activity.

COMMUNICATION & TRANSPARENCY

1. **Task-Specific Messaging**
   No lost emails or third-party chat confusion. Click **Messages** to chat directly within the context of any active task branch.
2. **Employee Leave & Transfers**
   If an assignee goes on leave or has emergency workload, the lead clicks **Transfer Branch**. The new owner picks up right where they left off.
3. **Putting Tasks On Hold**
   If a client or external dependency is delayed, managers can click **Put on Hold**. The countdown pauses until formally resumed.
4. **Regulatory Work Logs**
   Open **Work Logs** to view an audit trail of every status change, review decision, and submission with exact user attribution.

Management Oversight
Managers and executives can filter Work Logs by user, department, or date range to generate weekly delivery reports and evaluate team throughput.
