QuickLifeNow Task Management — End-to-End System Flowchart

Complete lifecycle from user login & task creation to execution, clarification, review, and final sign-off

Start / End | User Action / Input | Work & System Process | Decision Point

QuickLifeNow — Hierarchical Delegation & Question / Revision Loops

How 6-level delegation tree numbering works and how the two core feedback exception loops guarantee zero confusion

Start / End | User Action / Input | Work & System Process | Decision Point

	QL-0010.1.1.1 (Field Auditor)	Level 5: QL-0010.1.1.1.1 (Inventory)	Level 6: QL-0010.1.1.1.1.1 (Ledger)	Approval bubbles upward Hierarchy Rules & Permission Guardrails: 1. Strict Horizontal Isolation: Lead 1 (1.1) cannot view or modify deliverables belonging to Lead 2 (1.2). Work is focused and secure. 2. Automatic Roll-Up & Traceability: When a child sub-task (1.1.1) is submitted, it is reviewed by its direct parent (1.1). Sub-branches cannot bypass their lead. 3. Creator Sovereignty (Final Sign-off): Even if all sub-branches pass review, the task remains in 'In Progress' until the original Creator gives final sign-off. 4. Clean Tree Visualizer: Clicking the 'Workflow & 4-Level Flow' tab inside any task renders an interactive visual tree diagram in real time. PART B: THE TWO CRITICAL FEEDBACK & EXCEPTION LOOPS LOOP 1: 'REQUEST MISSING DETAILS' PROTOCOL (Pre-Execution) Assignee needs files / clarification Clicks 'Request Details' Types exact question Task safely pauses; Assigner alerted Assigner Submits Answer & uploads required file Task Resumes in 'My Action' Why This Protocol Matters: • Eliminates assumptions: Employees never deliver work based on incomplete guesses. • Timer Protection: Clarification questions pause SLA pressure so team metrics are never penalized. • Complete Log: The question and answer remain permanently attached to the task thread. LOOP 2: QUALITY REVIEW & CORRECTION LOOP (Post-Submission) Deliverable Submitted Files in Review Queue Passes Quality Standards? No Click 'Return for Revision' Write required changes Assignee Notified with Feedback; Makes corrections and re-submits Quality Verification Rules: • Return Notes are Mandatory: Reviewers cannot reject work without explaining exactly what to fix. • Version History: Prior submissions and revision comments are preserved in the submission history. • Immediate Notification: Assignee receives an alert with the reviewer's exact remarks. • Approval Stamp: Once approved, the branch is locked against accidental modification. • Final Verification: Creator gives the ultimate sign-off once all branches meet approval.

QuickLifeNow Task Management — Operational User Manual

Step-by-step role guides for Task Creators, Assignees, and Quality Reviewers

• Creator Role • Assignee Role • Reviewer Role

1 If You Are A Task Creator

Managers, Directors, Project Owners

1. Click '+ New Task'

Located at top right and in the sidebar. Set a clear title, description, priority, and completion deadline.

2. Select Assignees (1 to Many)

Pick all team leads who will share responsibility. Each lead receives their own sub-branch (1.1, 1.2) automatically.

3. Monitor 'Waiting on Others'

Track which assignees have finished, which are in review, and who is currently working in real time.

4. Provide Final Sign-Off

When all sub-branches pass review, verify the combined deliverable and click **Final Sign-Off** to archive the task.

Creator Principle: You own the final seal. Team members cannot mark tasks complete until you verify deliverables.

2 If You Are An Assignee

Engineers, Designers, Operations Staff

1. Check 'My Action Required'

All tasks waiting on your step appear here. Review the requirements and due date as soon as you receive an alert.

2. Ask Questions Immediately

Never work on guesswork. Click **Request Missing Details** to ask for passwords, assets, or criteria clarification.

3. Delegate If Necessary

If you are leading a module, click **Delegate Work** to assign sub-tasks (1.1.1, 1.1.2) to junior members.

4. Submit Work & Attachments

Attach your finished files (PDF, ZIP, DOCX, Code) and click **Submit Work for Review** with a clear summary note.

Assignee Principle: Always attach proof of work directly through the submission modal for fast reviewer approval.

3 If You Are A Reviewer

QA Leads, Department Heads, Checkers

1. Monitor 'Review Queue'

All submissions waiting for quality approval appear here with submitter name, department, and submission timestamp.

2. Download & Verify Attachments

Inspect files carefully against the original acceptance criteria. Check for errors, completeness, and formatting.

3. Approve or Return with Notes

If satisfactory, click **Approve**. If changes are required, click **Return for Revision** and state specific fixes.

4. Traceability & Audit Logs

Every decision is recorded in the permanent audit trail. Reviewers maintain accountability for work quality.

Reviewer Principle: Constructive revision notes ensure team members learn and make exact fixes on the first attempt.
